

FUSION MORTGAGEBOTLOS™

Work Flow and Collaboration— Move Loans through the Pipeline with Greater Efficiency and Ease

Streamline your lending processes, while enhancing efficiency to help you save time, money and valuable staffing resources.”

Tap the potential to help loan openers, processors, underwriters, closers and funders organize, track and streamline all processing steps.

WorkQueues, an additional feature of the Fusion MortgagebotLOS™ solution from Finastra, automatically performs workload balancing based on the available capacity of each user's queue. Work Queues also provides configuration options for expected turn times of individual tasks.

Because loan openers are assigned to tasks—not loans—this functionality allows them to concentrate on ordering necessary documents to expedite the loan file. Processors are able to see what tasks need to be completed, those that are on hold and those requiring follow-up. Underwriters can separate new loans (full file and appraisal only) from conditions, and when conditions are submitted back to Underwriting, the loan appears in the original Underwriter's queue.

Closers can prioritize requests for preliminary instructions and closing packages using the closing calendar. Both types of requests can be put on hold to clearly identify those loans that are ready to be worked on. Funders can manage

the amount of funds they need to reserve daily. Tasks can be put on hold in the event something comes up during closing that needs further review.

Streamline your lending processes, while enhancing efficiency to help you save time, money and valuable staffing resources.

- WorkQueues dashboard breaks down tasks systematically and can be turned on/off depending on user's rights.
- Navigate between the pipeline and WorkQueues with a single click.
- User group specific queue views help boost productivity enterprise-wide. (Customized is the wrong word to use since clients can't really customize)
