

## FUSION CASH MANAGEMENT

# Corporate Liquidity Management Module

Our liquidity management module offers a range of liquidity management tools to manage cash flow, credit, and working capital across many accounts.”

The efficient management of liquidity and cash flow has always been a core function of corporate treasury, but in today’s complex, fast-moving, and technology-driven environment, it demands far greater attention than ever before.

Given this increased focus, corporates need a liquidity management solution that will help to increase visibility, reduce risk and improve the availability of cash across the business.

Liquidity optimization is increasingly important as corporate treasurers strive to manage and optimise working capital in a dynamic, global environment. As the speed of transaction accelerates, so does the need for accurate and timely information. Liquidity management has increasingly become vital to corporate treasury departments, which need to manage working capital and to optimise surplus funds in a rapidly-changing regulatory environment.

A corporate liquidity management solution to automate the movement and pooling of money across and between different banks will improve efficiency and straight-through-processing (STP). This in turn will give corporations a more transparent view of liquidity, which will

enable them to optimise interest rates and gain a better understanding of—and tighter control over—where cash flow is located globally.

### Liquidity Management Solutions

Our liquidity management module offers a range of liquidity management tools to manage cash flow, credit and working capital across many accounts. Using the module’s physical balance consolidation capability, treasurers can improve cash flow, provide a consolidated view of surplus funds available across accounts and currencies, reduce external borrowing and liquidity risk, manage foreign currency liquidity requirements, and enhance visibility of cash across the group. Using the module’s notional balance consolidation capability, treasurers can optimise interest to offset account balances, reduce interest costs, maximise net returns and provide greater visibility over cash positions.

# The liquidity management module enables optimization of liquidity available across multiple bank accounts and currencies

## Features

- Allows for the set up and execution of automated sweeping and notional pooling instructions
- Enables set up and execution of third-party bank sweeping
- Supports local currency and cross currency instructions
- Simplifies the definition of passive pool structures
- Manages inter-company loans
- Calculates interest and allocates benefits

## Business Benefits

### Improves Visibility and Cash Flow Forecasting

To ensure that corporations meet their future financial obligations, a corporate treasurer needs visibility into current cash positions, as well as an accurate view of future cash flow and funding requirements. The liquidity management module enables optimization of liquidity available across multiple bank accounts and currencies.

### Reduces Risk

Using the liquidity management module, banks can help their corporate customers improve their business operations and centralise liquidity management for the more effective management of foreign exchange and interest rates, which will ultimately maximise revenues and minimise risks.

### Improves Business Decision Support

The liquidity management module enables a real-time view of cash, thereby enabling corporations to improve decision-making. Visibility into a firm's cash and liquidity position allows corporate treasurers to analyse surplus funds to make better investment and borrowing decisions.

### Improves Profitability

Liquidity management enables a corporate treasurer to leverage idle balances with automated pooling and sweeping instructions to improve day-to-day cash flow. Our liquidity management solution provides an overall cash position to a treasurer, allowing them to gain more control over working capital across the entire organization. Using an integrated approach to liquidity management will improve profitability and enhance forecasting for the firm.

## About Finastra

Finastra unlocks the potential of people and businesses in finance, creating a platform for open innovation. Formed in 2017 by the combination of Misys and D+H, we provide the broadest portfolio of financial services software in the world today – spanning retail banking, transaction banking, lending, and treasury and capital markets. Our solutions enable customers to deploy mission critical technology on premises or in the cloud. Our scale and geographical reach means that we can serve customers effectively, regardless of their size or geographic location – from global financial institutions, to community banks and credit unions. Through our open, secure and reliable solutions, customers are empowered to accelerate growth, optimize cost, mitigate risk and continually evolve to meet the changing needs of their customers. 48 of the world's top 50 banks use Finastra technology.
