

FUSION MORTGAGEBOTLOS

Data Management— Access Real-Time Data, Advanced Reporting and Third-Party Integrations

DataMart, an additional feature of Fusion MortgagebotLOS, lets you access real-time data, advanced reporting capabilities and client-built third-party integrations. This product allows users to quickly research their data and create custom reports, providing on demand business intelligence.

Generate insightful reports to easily evaluate business operations.”

DataMart comes with many standard reports, developed by assessing fields, or combinations of fields, most useful to you.

Loan files are generated from your web-portal hosted on Finastra servers. The file generation is based on pre-determined triggers (e.g. Save/Close 1003, registration, lock, closing, etc.). After the loan files are generated by Finastra, they are posted to your server through a web service. A web service processes the received files and saves them to the server's file system. A Windows service then imports the loan data into the SQL reporting database.

DataMart is a feature that's part of the comprehensive Fusion Mortgagebot lending solution. This best-in-class technology positions you to quickly organize and evaluate your business operations.

- Gain access to important information, anytime, anywhere
- Quickly organize data
- Generate insightful reports to easily evaluate business operations

Hosting Requirements

You must provide all computer resources for hosting the DataMart solution. You will be responsible for ensuring that the platform meets the performance and storage requirements, and must provide an internet-accessible URL to which Fusion Mortgagebot can push DataMart information.

About Fusion Mortgagebot

More than 1,400 clients nationwide are using the robust, scalable, easy-to-use Fusion Mortgagebot platform for automating loan applications, pricing, approvals, disclosures as well as processing, closing, imaging and secondary marketing.

About Finastra

Finastra unlocks the potential of people and businesses in finance, creating a platform for open innovation. Formed in 2017 by the combination of Misys and D+H, we provide the broadest portfolio of financial services software in the world today –spanning retail banking, transaction banking, lending, and treasury and capital markets. Our solutions enable customers to deploy mission critical technology on premises or in the cloud. Our scale and geographical reach means that we can serve customers effectively, regardless of their size or geographic location – from global financial institutions, to community banks and credit unions. Through our open, secure and reliable solutions, customers are empowered to accelerate growth, optimize cost, mitigate risk and continually evolve to meet the changing needs of their customers. 48 of the world's top 50 banks use Finastra technology.
