

## Factsheet – Fusion MX Transform

# ISO20022 transformation – an opportunity and a challenge

Critical market infrastructures – both cross-border and domestic - are changing. The move from the pervasive MT formats and other proprietary standards to ISO20022 has the potential to provide a step-change in levels of automation, transparency, interoperability, and data insights – but how can legacy payment systems based on the original standards adapt?

//

*Fusion MX Transform is a universal message transformation solution, that converts incoming payments, outgoing payments and interface related messages, from their current formats to the new ISO20022 standard, and vice-versa, supporting any payments engine and multi-clearings."*

Oren Marmur  
SVP, General Manager Payments, Finastra

### The challenge

The challenges facing Financial Institutions arise from three main areas:

- **Aggressive and diverse timelines** – different geographies are working both to different timelines and with differing migration strategies (big bang, or initial like-for-like followed by full transition).
- **Technical limitations of legacy systems** – many payment engines have the use of proprietary formats at their very core; for example, entire payment data models built on the MT standards. In such cases it could require a re-write to adapt, with the associated cost and risk.

- **Data truncation** – an inevitable complication arising from the move to data-rich ISO20022 message formats. Not only will a loss of data compromise the benefits of moving, but it will lead to regulatory breaches in areas such as compliance, AML, and Fraud.

### Financial Institutions need a solution that:

- Insulates their existing payment engines and core banking from the impact of the transformation.
- Is quick to deploy.
- Handles as opposed to Handling.

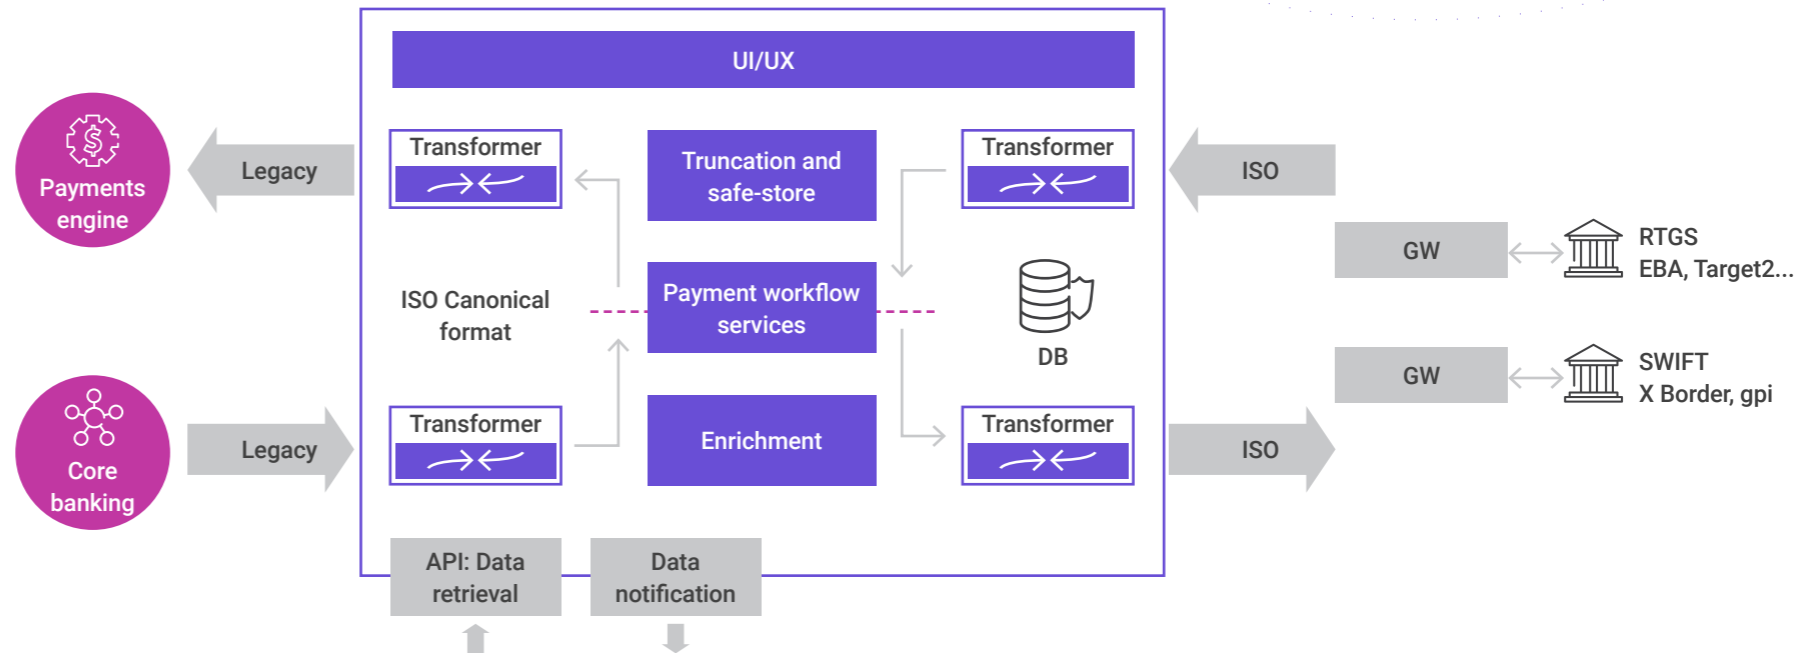

# Fusion MX Transform: The smart way to address ISO 20022 migration deadlines.

## Solution highlights

- Pre-configured for rapid onboarding.
- Payment Engine and Core Banking agnostic solution.
- Multi-entity and multi clearing (including SWIFT MT/ MX) support.
- Built on a full payment processing workflow (e.g. includes validation, MOP selection, matching, duplicate checking, advising, auditing etc.)
- Outgoing, incoming, and onward message flows supported.
- Multi format Advising message (MX + MT) for outgoing and incoming messages (e.g. name and address).
- Ability to copy back truncated data in case of correspondent Banking.
- Original message data can be retrieved via the UI, API or delivered through advising.
- Data Publisher mechanism allows the original message data to be transferred to a data warehouse or any other bank system.
- Industry change and scheme changes to ISO20022 message formats do not require upgrades to the Payment Engine or Core Banking systems.

## Introducing Fusion MX Transform

## Why Finastra

**Fully packaged solution** – our global footprint both in terms of customers and clearing system expertise has allowed to build a solution that is quick to deploy while comprehensive in ISO20022 processing support.

**Evergreen** – remove the overhead of regular maintenance when ISO20022 standards and associated clearing schemes change. Our solution provides full insulation of existing legacy applications.

**Transform** – the solution is built on our world class Payment Hub – Fusion Global PAYplus – which means it is underpinned by best practice, end-to-end payment processing workflows for all payment types, offering much more than just message transformation services.

**Meet ISO 2022 compliance challenges and improve the customer experience for high-value and real-time payments.**
