FINASTRA

Factsheet - Finastra Trade Portal

Your gateway to efficient international trade

Enables corporates to execute, manage and report on international trade transactions, and digitize letters of credit, guarantees and collections.

Trade finance remains constrained by paper-based processes, fragmented workflows and disconnected systems that limit visibility and slow customer service. As client expectations evolve and digital trade adoption accelerates, banks need modern platforms that simplify operations, support growth and deliver the seamless experiences corporate customers increasingly expect.

55% of corporate banks say it is becoming harder to win and retain customers[1]

Corporate customers increasingly expect intuitive, self-service digital experiences that provide real-time visibility and convenience across every stage of the trade lifecycle. Enhancing the client experience is now a key competitive differentiator.

Global standards are accelerating the shift to digital trade

Initiatives such as MLETR, eUCP, eURC and URDTT are creating momentum towards greater digitalization and interoperability. Banks need flexible technology that can adapt to evolving regulatory requirements and support the future of trade.

Support a more sustainable trade ecosystem

Digital trade is helping to reduce the environmental impact of global commerce. According to a 2025 study2, digital trade documentation has already delivered carbon savings equivalent to planting 2.9 million trees worldwide. By replacing paper-based processes with digital workflows, banks can support more sustainable trade operations while improving efficiency and reducing administrative complexity.[2]
